Installing Agilian with No-Install

Chapter 2 - Installing Agilian with No-Install

While most of the applications nowadays require an installation, the No-Install approach is considered to be a lightweight alternative. This chapter will give you an introduction to what the No-Install version is, and show you how to get AG started from downloading to running the application. Here are the covered topics:

- Introduction to the No-Install version
- Downloading Visual Paradigm Suite from the Internet
- Installing Visual Paradigm Suite and AG
- Start the application
- Importing a valid license key

Introduction to the No-Install version

There is no separate installer made for AG. In order to install AG, you must download and install Visual Paradigm Suite, an application suite that includes all the Visual Paradigm products, and install AG from the suite.

No-Install, as suggested by its name, is a compressed file that contains the Visual Paradigm Suite in a ready-to-run form. Although the suite is ready to run, the products inside the suite still require an installation. You can run the product(s) inside the suite as soon as the file is decompressed and the post-installation procedures are completed. A characteristic that makes a No-Install different from the installer is that, it will not register itself to the system, nor to create any shortcuts during the post-installation. This makes the installation more flexible as you can move the installation to somewhere else simply by moving the whole installation folder without the concern of breaking any linkage to the system.

Downloading Visual Paradigm Suite

To download Visual Paradigm Suite:

1. Visit Visual Paradigm's official download site at: <http://www.visual-paradigm.com/download/>
2. Click on the image for Visual Paradigm Suite.

4. Under the list of **Evaluation Product(s)**, select *Agilian*. This option will affect the capability of the evaluation key, which will be sent upon downloading the suite.
5. Choose the way of receiving the evaluation key, or not to receive it. Here are the description of each of the possible ways:

Ways of receiving an evaluation key	Description
Do not send me the evaluation key	Just to download the suite without the need of an evaluation key.
Send via email as attachment	You will receive an email attached with the key file. Make sure your server allows email with attachments for choosing this option.
Send via email as URL	You will receive an email, which includes a download link of the key file.

6. Select your operating system from the **Platform** drop-down menu. Choose the item with a bracket (*No-Install*) added to the name of the platform.
7. From the **Mirror Site** drop-down menu, choose the location that is closest to your current location for a faster download speed.
8. Click **Download** to proceed with downloading the Visual Paradigm Suite.

`tar -zxf %NO-INSTALL-FILE.tar.gz% -C %DESTINATION-FOLDER%`

2. Execute `%NO-INSTALL-DECOMPRESSED_FOLDER%/bin/VP Suite.exe`.

Note

For Linux and Mac OS X platforms, execute the file VP Suite inside `%NO-INSTALL-DECOMPRESSED-FOLDER%/bin/`

5. Select **Download Online Help** if you want to be able to access the Help contents from within the tool.

6. Select **Download PDF/HTML Version** if you wish to read the documentation in this two types of formats.
7. Press **Next >** to proceed to the license import page.
8. A combined license key is a key file which allows unlocking multiple products. To import a combined license key, select Combined License Key and specify the file path of the key.

A single license key is a key file which allows unlocking only one product. To import a single license key, select Single License Key and specify the file path of the key.

The import of license key is optional at this point, because you can import it when you run AG. Click **Next** to proceed with copying files.

Note

For evaluation, the key should be sent to your email box (unless you have chosen not to receive it before download). If you have not received the email with key yet, and if you have selected to receive the key as attachment, the email might be treated as spam by mistake. Click on **Request Evaluation Key** to ask for another one. This time, try not to select sending the key as attachment.

9. Upon finishing, you can select whether to start AG or not. Keep **Agilian 1.0** selected and click **Next >** will run AG right away. Click **Next >** to finish the installation.

Note

For Linux and Mac OS X platforms, execute the file 'run_ag' inside `%NO-INSTALL-DECOMPRESSED-FOLDER%/launcher`

2. The **Workspace Launcher** appears. A workspace is a repository of the UML projects. Besides storing projects, it stores also the settings, user interface perspectives and other preferences defined for the working environment. Specify the workspace folder.

If you do not want this dialog box to appear again, check **Use this as the default and do not ask again**. This will cause AG to open the specified workspace folder automatically the next time.

If you already have an existing workspace, you can import the settings from there by clicking **Import Workspace...** Click **OK** to continue.

3. If you have imported a valid license key before, AG should be started now. If not, the **License Key Manager** appears. The License Key manager is a utility for importing a license key. To import a key:
 1. Select **License Keys > Import...** from the menu.
 2. Specify the file path of the key file.
 3. Press **Import** to import the key file.

Click **Close** to close the **License Key Manager** and start AG. If it prompts you with an invalid license key message, make sure the key you imported does match with the tool that you are running in terms of the following aspects:

- Product (e.g. Agilian)
- Version (e.g. Version 1.0)
- Edition (e.g. Standard Edition)

Uninstalling AG

Uninstalling AG will cause AG to be removed from Visual Paradigm Suite. To uninstall AG:

1. Close AG if it is running.
2. Run `%NO-INSTALL-DECOMPRESSED_FOLDER%/uninstaller/uninstall_ag.exe`

Note
